MasterEmaco® N 400
Polymer-modified high-build repair mortar with integral corrosion inhibitor

PRODUCT HIGHLIGHTS
• Extended working time
• Very high-build; up to 3” on vertical and 1½” on overhead surfaces.
• Shrinkage compensation minimizes stresses on the bond line.
• Very low chloride permeability and an integral corrosion inhibitor protects reinforcing steel.
• Polymer modification improves adhesion and provides increased freeze/thaw stability.
• Readily mixes with MasterEmaco A 400 to produce a workable consistency.

HOW TO APPLY
SURFACE PREPARATION
1. Substrate must be structurally sound and fully cured (28 days).
2. Saw cut the perimeter of the area being repaired into a square with a minimum depth of ¼” (6 mm).
3. The surface to be repaired must be clean, free of laitance and saturated surface-dry (SSD) following ICRI Guideline no. 210.3 to permit proper bond.

REINFORCING STEEL
1. Remove all oxidation and scale from the exposed reinforcing steel in accordance with ICRI Technical Guideline No. 310.1R.
2. For additional protection from future corrosion, coat the prepared reinforcing steel with MasterProtect P 8100 AP.

APPLICATIONS
• Interior and exterior
• Vertical and overhead
• Above and below grade
• Spalls or holes in concrete
• Deteriorated edges

SUBSTRATES
• Concrete
• Masonry

DESCRIPTION
MasterEmaco N 400 is a two component polymer-modified high build, lightweight repair mortar with an integral corrosion inhibitor. It is designed for repairing vertical and overhead concrete surfaces in deep lifts.

PACKAGING
45 lb (20.4 kg) polyethylene bags (MasterEmaco A 400 liquid sold separately)
No. 2 Kit: 225 lbs (102 kg) powder and 5 gallon (18.9 L) liquid

YIELD
45 lbs (20.4 kg) of MasterEmaco N 400 mixed with 1 gallon (3.8 L) of MasterEmaco A 400 yields 0.5 ft³ (0.015 m³)

STORAGE
Store and transport in unopened containers in cool, clean, dry conditions. Do not allow the liquid component to freeze.

SHELF LIFE
12 months when properly stored

VOC CONTENT
0 g/L, less water and exempt solvents
Technical Data

Composition

MasterEmaco N 400 is a proprietary blend of cement, graded aggregate, shrinkage-compensating agents, additives, and latex.

Test Data

The following results were obtained with a liquid / powder ratio of 3.7 quarts per 45 lb (3.5 L per 20.5 kg) bag.

All application and performance values are typical for the material, but may vary with test methods, conditions, and configurations.

¹No bonding agent scrubbed into prepared surface.
²Portland cement concrete, typical range is 4.0–8.0 × 10⁻⁶ in/in⁰F (7.2–14.4 × 10⁻⁶ cm/cm⁰C), according to American Concrete Institute.
³Relative dynamic modulus.
5. Precondition material to 70 °F ±5° (21 °C ±3°) before mixing.
6. For the occasional 1 bag mix, mechanically mix at slow speed with a ¾” drill and mixing paddle.
7. Add approximately 3 quarts (2.8 L) of MasterEmaco A 400 into a clean mixing container. Gradually sift in powder ⅛ at a time while mixing continuously at slow speed (high speeds may entrain air). Mix for a minimum of 3 minutes to ensure a uniform, lump-free consistency. Do not exceed a total of 1 gallon (3.8 L) of mixing liquid per 45 lb (20.4 kg) bag.
8. For normal applications, place 3 quarts (2.8 L) of MasterEmaco A 400 into the clean mixer for each complete 45 lb (20.5 kg) bag of MasterEmaco N 400. The powder should always be added to the liquid.
9. Ensure that MasterEmaco N 400 is thoroughly mixed; a forced-action mixer is essential. Do not use free-fall mixers.
11. Depending on the ambient temperature and the desired consistency, additional MasterEmaco A 400 may be added, but the maximum liquid content should not exceed 1 gallon (3.8 L) per 45 lb (20.5 kg) bag of MasterEmaco N 400.

APPLICATION
1. Dampen the surface with potable water; it must be saturated surface-dry (SSD) with no standing water.
2. With a gloved hand, scrub a small quantity of mixed material into the SSD substrate. Thoroughly key in and work the material throughout the cavity to promote bond. Do not apply more of the bond coat than can be covered with mortar before the bond coat dries.
3. MasterEmaco N 400 can be applied in single lifts up to 3” (76 mm) in thickness on vertical surfaces and up to 1½” (38 mm) in thickness on overhead surfaces (without the use of form work). Placement time is approximately 45 minutes at 70 °F (21 °C) and 50% relative humidity.
4. Trowel, shave or shape material to the desired finish after initial set.
5. The recommended application range of MasterEmaco N 400 is from 40 to 90 °F (4 to 32 °C). Follow ACI 305 and 306 for hot or cold weather guidelines.

CURING
Cure with an approved water based curing compound compliant with ASTM C 309 or preferably ASTM C 1315. If the repair area will receive a coating, wet curing is recommended.

CLEAN UP
Clean tools and equipment with clean water immediately after use. Cured material must be removed mechanically.

FOR BEST PERFORMANCE
• Do not mix partial bags.
• Do not bridge moving cracks or joints.
• Do not overwork material.
• Do not add plasticizers, accelerators, retarders, or other additives.
• Do not extend with aggregate.
• Bonding agents are recommended for large areas as well as permanently damp areas.
• Protect from freezing for 24 hours after application.
• For professional use only; not for sale to or use by the general public.
• Make certain the most current versions of product data sheet and SDS are being used; visit www.master.builders-solutions.BASF.us to verify the most current versions.
• Proper application is the responsibility of the user. Field visits by BASF personnel are for the purpose of making technical recommendations only and not for supervising or providing quality control on the job site.

HEALTH, SAFETY AND ENVIRONMENTAL
Read, understand and follow all Safety Data Sheets and product label information for this product prior to use. The SDS can be obtained by visiting www.master.builders-solutions.BASF.us or calling 1(800)433-9517. Use only as directed. For medical emergencies only, call ChemTrec® 1(800)424-9300.

LIMITED WARRANTY NOTICE
BASF warrants this product to be free from manufacturing defects and to meet the technical properties on the current Technical Data Guide, if used as directed within shelf life. Satisfactory results depend not only on quality products but also upon many factors beyond our control. BASF MAKES NO OTHER WARRANTY OR GUARANTEE, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WITH RESPECT TO ITS PRODUCTS. The sole and exclusive remedy of Purchaser for any claim concerning this product, including but not limited to, claims alleging breach of warranty, negligence, strict liability or otherwise, is the replacement of product or refund of the purchase price, at the sole option of BASF. Any claims concerning this product must be received in writing within one (1) year from the date of shipment and any claims not presented within that period are waived by Purchaser. BASF WILL NOT BE RESPONSIBLE FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFITS) OR PUNITIVE DAMAGES OF ANY KIND.

Purchaser must determine the suitability of the products for the intended use and assumes all risks and liabilities in connection therewith. This information and all further technical advice are based on BASF’s present knowledge and experience. However, BASF assumes no liability for providing such information and advice including the extent to which such information and advice may relate to existing third party intellectual property rights, especially patent rights, nor shall any legal relationship be created by or arise from the provision of such information and advice. BASF reserves the right to make any changes according to technological progress or further developments. The Purchaser of the Product(s) must test the product(s) for suitability for the intended application and purpose before proceeding with a full application of the product(s). Performance of the product described herein should be verified by testing and carried out by qualified experts.
