Framed Construction incorporating Fluid-Applied Vapor Permeable and Impermeable Air/Water-Resistive Barriers

NOTES
- Ensure spray foam is low expansion.
- Provide backer rod and MasterSeal NP 150 between pipe and cladding (by others).
- Embed Sheathing Fabric in MasterSeal AWB 660, MasterSeal AWB 665 or MasterSeal AWB 660 I

TYPICAL PENETRATION THROUGH WALL CONSTRUCTION (ROUGH CUT)

NOTES
- Cut a square piece of MasterSeal AWB 971 FIB large enough to extend past the pipe by 2” in each direction.
- At the center of the square piece of MasterSeal AWB 971 FIB, pierce a small hole with a blade or scissors.
- With a blade or scissors, cut an “X”. Turn the square about 45° and cut another X. The center point of both “X”s will be the point you pierced previously.
- Insert the pipe through the newly cut square so it is centered with a minimum of 2” on each side with the cut flaps point outward. The square should be flush with the sheathing, See Step 1.
- Embed MasterSeal AWB 971 FIB in MasterSeal AWB 660, MasterSeal AWB 665 or MasterSeal AWB 660 I and coat the flaps around the pipe, See Step 2.
- Wrap a 1” strip of MasterSeal AWB 971 FIB embedded in MasterSeal AWB 660, MasterSeal AWB 665 or MasterSeal AWB 660 I around the flaps.
