Finestop VB Product Bulletin
A One-Component Fluid-Applied Air/Water-Resistive Barrier that Can Also Function as a Class I Vapor Retarder
Finestop VB

DESCRIPTION
Finestop VB is a one-component fluid-applied air/water-resistive barrier that can also function as a Class I vapor retarder. This water-resistant, resilient membrane may be spray-, roller-, or brush-applied directly to approved above grade wall substrates. It provides excellent secondary moisture protection behind most wall claddings including brick, siding, metal panels, EIFS and stucco. A slipsheet is required for stucco claddings.

USES
For use over the following exterior wall substrates:
- Poured concrete/unit masonry, ASTM C1177 type sheathings, including DensGlass™ and DensElement™ exterior sheathing, eXP™ sheathing, GlasRe® sheathing, Securock™ glass-mat sheathing, Weather Defense™ Platinum sheathing, GreenGlass® sheathing, PermaBase™ cement-board by National Gypsum and other cement-boards (ASTM C1325 Type A Exterior), Untreated Exposure I or exterior plywood sheathing (grade C-D or better), Untreated Exposure I OSB, gypsum sheathing (ASTM C79/ASTM C1396).

Do not use Finestop VB for below-grade applications or on surfaces subject to water immersion.

Roll or spray / backroll for optimum coverage rate. Other application methods may provide less coverage. Actual results may vary depending on surface porosity, roughness, moisture uptakes, or other factors.

Advantages

- Meets ASTM E2357 Air Leakage of Building Assemblies requirements specified by the ABAA and listed in ASHRAE 189.1
- Meets requirements of ICC-ES AC 148; can be used as a flexible flashing in rough openings or through-wall penetrations
- Self-sealing; meets ASTM D 1970 Nail Sealability requirements
- Approved for Finestone Wall Systems; full system warranty with Finestone EIFS and stucco wall claddings
- Liquid-applied, continuously-bonded membrane; eliminates seams, lap joints and staples; transmits wind loads directly to the substrate
- One component, water-based, very low VOC content; safe for workers and the environment, low odor, easy application
- Nonflammable as applied; promotes workplace safety
- Spray-, roller- or brush-applied; versatile, applicator-friendly performance
- Compatible with lightweight, low-cost spray equipment; fast, easy, economical application
- No primer required; single pass application on most substrates
- Asphalt and plasticizer-free; easy cleanup, will not dry out or leach plasticizer after application
- 180-day maximum outdoor exposure; can schedule application before cladding installation

Notes
1. Based on 2012 IBC definitions
## TEST RESULTS

<table>

</thead>
</table>
| **Air Leakage of Air Barrier Assemblies**  
ASTM E 2357             | 0.0007 l/s·m² (0.0001 cfm/ft²) @ 75 Pa (1.57 psf) positive / post conditioning  
0.0014 l/s·m² (0.0003 cfm/ft²) @ 75 Pa (1.57 psf) negative / post conditioning |
| **Air Permeance of Building Materials**  
ASTM E 2178             | 0.0049 l/s·m² @ 75 Pa  
(0.00098 cfm/ft² @ 1.57 psf) |
| **Rate of Air Leakage**  
ASTM E 283              | 0.0185 l/s·m² @ 75 Pa (0.0037 cfm/ft² @ 1.57 psf) |
| **Water Vapor Transmission**  
ASTM E 96 Method A       | 0.09 Perms (grains/hr. in Hg. ft²) @ 26 mils wet film thickness  
0.18 Perms (grains/hr. in Hg. ft²) @ 10 mils wet film thickness |
| **Pull-Off Strength of Coatings**  
ASTM D 4541             | Pass - Min. 110 kPa (15.9 psi) or substrate failure (Tested over exterior gypsum sheathing, ASTM C1177 glass-mat sheathing, cement board, OSB, plywood; pvc and galvanized flashing) |
| **Nail Sealability (without Sheathing Fabric)**  
ASTM D 1970             | Pass - No water penetration at galvanized roofing nail penetration under 127 mm (5") head of water after 3 days at 4° C (40° F) |
| **Surface Burning**  
ASTM E 84                | Class A flame speed <25  
Class A smoke developed index <450 |
| **Radiant Heat Multi-Story Tests**  
NFPA 268, NFPA 285       | Pass using many wall designs  
(EIFS cladding with 12” EPS insulation) Engineering analyses available on request |
| **Water-Resistive Barriers under EIFS**  
ASTM E 2570             | Pass  
(Meets all criteria in the standard) |
| **Compound Stability**  
(Elevated Temperature)  
ASTM D5147 Section 15   | No flowing, dripping, or drop formation up to 177° C (350° F) |
| **Fire Resistance**  
ASTM E119/UL 263         | Will not add or detract from the rating of a fire resistive wall assembly |
| **Drainage Efficiency**  
ASTM E 2273              | 99% |

### ICC-ES AC 212 Acceptance Criteria for Water-Resistive Coatings used as Water-Resistive Barriers over Exterior Sheathing

**Sequential Testing - Structural, Racking, Restrained Environmental Conditioning and Water Penetration**

1. **Structural**: ASTM E 1233 Procedure A  
   - No cracking at joints or interface of flashing
2. **Racking**: ASTM E 72  
   - No cracking at joints or interface of flashing
3. **Restrained Environmental Conditioning**: ICC-ES AC 212  
   - No cracking at joints or interface of flashing
4. **Water Penetration**: ASTM E 331  
   - No water penetration after 90 min @ 299 Pa (6.24 psf)  
   - Tested over OSB and gypsum sheathing

### Sequential Testing - Weathering

1. **UV Light Exposure**: ICC-ES AC 212  
   - No cracking or bond failure to substrate
2. **Accelerated Aging**: ICC-ES AC 212  
   - No cracking or bond failure to substrate
3. **Hydrostatic Pressure Test**:  
   - AATCC 127-1985  
   - No water penetration at 55 cm (21.7") column of water for 5 hours

Finestop VB

MIXING
1. Use directly from original packaging or prepare in a container that is clean and free of foreign substances. Do not use a container which has contained or been cleaned with a petroleum-based product.
2. Mix Finestop VB with a clean, rust-free paddle and drill until thoroughly blended. Dilution of Finestop VB is not recommended.
3. Additives, other than BASF LT Additive, are not permitted.
4. Close container when not in use.
5. Clean tools and equipment with water immediately after use. Dried material can only be removed mechanically.

APPLICATION
Job Conditions
Do not apply BASF materials in ambient temperature below 4 °C (40 °F). Provide supplementary heat during installation and drying period (at least 24 hours after installation and until dry) when temperatures less than 4 °C (40 °F) prevail. Do not apply BASF materials to frozen or frost-laden surfaces. Temperatures less than 4 °C (40 °F) prevail. Do not apply BASF materials in ambient temperature below 4 °C (40 °F). Provide supplementary heat during installation and drying period (at least 24 hours after installation and until dry) when temperatures less than 4 °C (40 °F) prevail. Do not apply BASF materials to frozen or frost-laden surfaces.

Surface Preparation
Substrate shall be dry, clean, sound and free of release agents, paint or other residue or coatings. Verify substrate is flat, free of fins or planar irregularities greater than 6.4 mm in 3 m (1/4" in 10'). Unsatisfactory conditions shall be reported to the general contractor and corrected before application of Finestop VB.

Equipment
Use a 20 mm (3/4") nap roller or paint brush. If spraying, refer to Spray Application technical bulletin for spray application equipment and application instructions.

Note: If using roller application, it is necessary to pre-wet the synthetic roller pad with water and spin out the excess water. The pre-wetting only needs to be done once at the start of application.

Procedure
1. Substrate shall be of a type acceptable by BASF and shall be installed per substrate manufacturer’s instructions and local code requirements.
2. Rough openings and sheathing joints can be treated with MaxFlash Liquid Flashing Membrane or Sheathing Fabric saturated with Finestop RA. See following sections for additional steps.

USING MAXFLASH
Flashing Rough Openings:
A. Apply a bead of MaxFlash to each corner of the rough opening and tool MaxFlash into corners, ensuring that corners are fully sealed. Where wood bucks are used, tool MaxFlash into gaps between bucks and between the buck and building structure. Apply additional MaxFlash in a zigzag pattern onto head, sill, jambs and exterior substrate. Spread MaxFlash evenly across the rough opening to form a uniform, continuous, void- and pinhole-free membrane with a 12–30 mil thickness. Spread MaxFlash before it skins, typically within 2–3 minutes of application.
B. Extend MaxFlash membrane minimum 4-inches onto the exterior wall, maintaining 12–30 mil thickness.
C. Allow MaxFlash to skin before applying BASF fluid-applied air/water-resistive barrier to sheathing. Lap air/water-resistive barrier a minimum of 2-inches onto MaxFlash, creating a continuous, monolithic air/water-resistive barrier.
D. Allow MaxFlash to cure before installing windows.

Sheathing Joints:
MaxFlash can be used to fill sheathing joints up to ½" wide.
A. Apply a thick bead of MaxFlash to sheathing joints.
B. Spread MaxFlash evenly 1-inch beyond the joint on either side. Apply 20–30 mils of MaxFlash across the sheathing joint.
C. Spot fastener heads with MaxFlash or BASF fluid-applied air/water-resistive barrier.
D. Allow MaxFlash to skin before applying subsequent coat of air/water-resistive barrier.
See the MaxFlash product bulletin for coverages and additional product highlights.

- OR -
USING SHEATHING FABRIC
Flashing Rough Openings:
Wrap openings with Sheathing Fabric. Applying a generous amount of mixed Finestop VB to all surfaces and immediately embedding Sheathing Fabric, completely saturating the Sheathing Fabric. If necessary, apply a second coat of Finestop VB to ensure a complete, void-free membrane.

Sheathing Joints:
A. Spot all fasteners and precoat sheathing joints, terminations, inside and outside corners with mixed Finestop VB using a 101 mm (4") wide by 20 mm (3/4") nap roller, brush or spray.
B. 1. Immediately place and center Sheathing Fabric over wet Finestop VB at all sheathing joints, terminations, inside and outside corners, as well as knot holes and check cracks that may exist in plywood or OSB. Ensure Sheathing Fabric extends evenly on both sides of the sheathing joint. Completely saturate Sheathing Fabric with Finestop VB.
2. Lap Sheathing Fabric 63.5 mm (2 1/2") minimum at intersections.
3. If using roller, brush, or trowel application, allow to dry to the touch before applying Finestop VB to entire wall surface. If spraying, “wet on wet” application is acceptable.

3. Apply Finestop VB to DensGlass™ or DensElement exterior sheathing, eXp™ sheathing, GlasRoc® sheathing, Securock® glass-mat sheathing, Weather Defense™ Platinum sheathing, GreenGlass® sheathing, PermaBase® cement-board by National Gypsum and other cement-boards (ASTM C1325 Type A Exterior), gypsum sheathing (ASTM C79/ASTM C1396) plywood, OSB or CMU substrate(s) with a 20 mm (3/4") nap roller or spray to a consistent, minimum 13 wet mil thickness. Prior to application of the second coat, visually inspect to assure sheathing surface is blister free and coating is free of voids and pinholes. Repair
if needed and then apply a second coat after the initial coating is sufficiently dry. A minimum of two (2) 13 mil wet coats of Finestop VB is required. Finestop VB may be sprayed to a 26-mil thickness in one wet application. Backrolling may be needed to produce a pinhole-free film. If backrolling is required, a second spray application may be needed. **Note:** Refer to **Spray Application** technical bulletin for spray application equipment and application instructions.

**Drying Time**
Allow to dry completely, typically 2 to 10 hours, before proceeding with EIFS or other cladding installation. Protect from rain and from temperatures less than 4 °C (40 °F) for 24 hours.

**For Best Performance**
Prior to application of EPS insulation boards for EIFS or alternative claddings, visually inspect the Finestop VB. For voids, pinholes, surface deficiencies, etc. Repair deficiencies and areas that are not intact. Apply additional Finestop VB as necessary such that Finestop VB is free of voids, pinholes, etc. All sheathing joints, terminations, inside and outside corners must be reinforced with 4", 6" or 9" Sheathing Fabric or WS FLASH 4 or 9 or treated with MAXFLASH. Reference
LIMITATIONS

Shipping & Storage
Protect BASF materials during transportation and installation to avoid physical damage. Store BASF materials in a cool, dry place protected from freezing. Store at no less than 4°C (40°F). Protect from extreme heat and direct sunlight.

Stacking
Do not stack pallets.

Shelf Life
Approximately 2 years, properly stored in original containers.

TECHNICAL SUPPORT
Consult the BASF Wall Systems Technical Services Department for specific recommendations concerning all other applications. Consult the Finestone website, www.finestone.basf.com, for additional information about products and systems and for updated literature.

HEALTH AND SAFETY
Follow good safety and industrial hygiene practices during handling and installing products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read Safety Data Sheet (SDS) and related literature on this product before specification and/or installation.

Solids
74% solids

VOC Content
11 g/l, or 0.09 lbs/gal less water and exempt solvents per ASTM D2369 (based in part on EPA method 24).

For medical emergencies only call CHEMTREC at (800) 424-9300.

WARRANTY
BASF warrants this product to be free from manufacturing defects and to meet the technical properties on the current Product Bulletin, if used as directed within shelf life. Satisfactory results depend not only on quality products but also upon many factors beyond our control. BASF MAKES NO OTHER WARRANTY OR GUARANTEE, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WITH RESPECT TO ITS PRODUCTS. The sole and exclusive remedy of Purchaser for any claim concerning this product, including but not limited to, claims alleging breach of warranty, negligence, strict liability or otherwise, is shipment to purchaser of product equal to the amount of product that fails to meet this warranty or refund of the original purchase price of product that fails to meet this warranty, at the sole option of BASF. In the absence of an extended warranty issued by BASF, any claims concerning this product must be received in writing within one (1) year from the date of shipment and any claims not presented within that period are waived by Purchaser. BASF WILL NOT BE RESPONSIBLE FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFITS) OR PUNITIVE DAMAGES OF ANY KIND.

Purchaser must determine the suitability of the products for the intended use and assumes all risks and liabilities in connection therewith. This information and all further technical advice are based on BASF’s present knowledge and experience. However, BASF assumes no liability for providing such information and advice including the extent to which such information and advice may relate to existing third party intellectual property rights, especially patent rights, nor shall any legal relationship be created by or arise from the provision of such information and advice. BASF reserves the right to make any changes according to technological progress or further developments. The Purchaser of the Product(s) must test the product(s) for suitability for the intended application and purpose before proceeding with a full application of the product(s). Performance of the product described herein should be verified by testing and carried out by qualified experts.
