Introduction
Blistering or bubbling of stucco finish is often caused by water that has gotten behind the finish. Prior to repairing damaged finish, a root cause analysis is needed. Deficiencies must be corrected prior to repairing finish, or the blistering and bubbling may reoccur.

Note that minor color inconsistencies may cause patches to remain visible after application.

Equipment
• Appropriate personal protective equipment
• Scraper, wire brush
• Stainless steel trowel and margin trowel
• Plastic float
• Drill and paddle mixer

Materials
• SENERFLEX or Senerflex TERSUS textured finish
• BASF STUCCOBOND
• BASF STUCCOBASE
• Masking tape

Procedure
1. Thoroughly clean all surfaces that will be coated, and allow to dry.
2. Inspect all sealant joints and repair as needed.
3. Remove blistered stucco finish with a scraper or other tool.
4. If stucco repair is needed, perform steps 4-7.
   4. Remove any weak, loose or scaling stucco with a scraper or wire brush to a uniform depth.
   5. Mask off areas that are not intended to be resurfaced and may come in contact with base coat or finish.
   6. Dampen the surface and apply BASF STUCCOBOND according to directions on the BASF STUCCOBOND Product Bulletin
   7. Apply BASF STUCCOBASE according to directions on the BASF STUCCOBASE Product Bulletin. Allow to cure for at least 4-days.
   8. Apply Senergy SENERFLEX or SENERFLEX TERSUS finish using a stainless steel trowel to the thickness of the largest aggregate in the finish. Scrape finish to a uniform thickness, then float the finish.
   9. Remove masking tape before the finish is dry. Touch up edges with a small paint brush. Allow finish to dry.

Technical Information
Consult the BASF Technical Services department for specific recommendations concerning all other applications. Consult the Senergy website, www.senergy.basf.com, for additional information about products and systems and for updated literature.
