**Senerflex® Classic PB Wall System**

Class PB Exterior Insulation and Finish System providing a primary moisture barrier and optional secondary air/weather barrier

**System Overview**
Senerflex Classic PB Wall Design

**DESCRIPTION**
Senerflex Classic PB is an Exterior Insulation and Finish System (EIFS) that provides a durable weather-resistant primary barrier. The system offers design flexibility, aesthetic appeal and energy savings. Integrated system components include adhesive, EPS insulation board, reinforced base coat and 100% acrylic polymer finish. Finishes are available in a limitless color selection and offer performance enhancement options, including increased resistance to dirt pick-up and mildew. Other systems options include: air/water-resistant barriers, protection against weather impact and specialty finishes that create stone-like, metallic or mottled stucco appearances.

Senerflex Classic PB complies with ASTM E 2568 and has passed rigorous testing including Full-Scale Fire, Wind-Load, Wind-Driven Rain, and Large and Small Missiles.

The system features easy installation, proven durability and low maintenance.

Apply the system directly to the following acceptable substrates:
- PermaBase® Cement Board and other cement boards conforming with ASTM C1325 (Type A - exterior);
- poured concrete/unit masonry; ASTM C1177 type sheathings, including Weather Defense™ Platinum sheathing, GreenGlass® sheathing, eXP™ sheathing, GlasRoc® sheathing, Securock™ glass-mat sheathing, and DensGlass® exterior sheathing; gypsum sheathing (ASTM C79/C1396);
- Exposure I or exterior plywood (Grade C/D or better);
- or Exposure I OSB.

**USES**
For new or retrofit commercial and institutional construction such as hotels, hospitals, retail, schools, multi-family apartments and condominiums, and government facilities. Senerflex Classic PB can be panelized to expedite year-round construction. Use over mass walls where drainage is not required.

**ADVANTAGES**
- Cost-effective
- Ability to achieve any architectural style with unlimited design options
- Economical architectural detailing
- Seamless exterior blanket of insulation provides high R values, lowers heating and cooling costs
- Multiple options for impact resistance improve functional design, ease of maintenance
- Plaster trims/accessories are not required for installation
- Wide selection of standard colors, custom colors, and finish textures

**DESIGN CONSIDERATIONS**

**General**
- The design wind-load shall not exceed the system’s allowable wind-load as stated in applicable code reports.
- Details shall conform with BASF Wall Systems’ recommendations and shall be consistent with the project requirements.
- System is not designed for horizontal applications.
- Use high impact mesh for ground floor applications in high traffic areas.
- Consult the framing and sheathing manufacturer for design and application considerations.
- Limit the use of dark colors. Heat build up behind dark colors can adversely affect the performance of EPS insulation. Use of colors with a light reflectance value of less than 20% require the approval of BASF Wall Systems’ Technical Department.
- Do not use below grade; system must terminate a minimum of 203 mm (8”) inches above grade.

**Expansion Joints**
- Required in the following locations:
  - Where movement is anticipated (e.g., floor lines, canopies, carports, porte-cocheres, etc.)
  - Where EIFS meets dissimilar materials (e.g., windows, doors, transitions to brick or other siding)
  - Where substrate materials change
  - At floor lines in wood frame construction where movement or cross grain shrinkage is anticipated
  - At structural or existing expansion joints
  - Expansion joint size should be determined by a design professional.

**Horizontal Applications**
Minimum slope: 1:2 with maximum width of 30.5 cm (12") [e.g. 15 cm in 30.5 cm (6” in 12") width].

**Substrate**
- Maximum substrate design deflection is L/240.
- Consult the framing and sheathing manufacturer for design and application considerations.

**Sealants, Backer Rod, Flashing**
- Approved sealant installed with approved backer rod or bond breaker tape shall be used at all transitions between EIFS and other elements such as windows, doors, vents, penetrations, transitions to dissimilar elements, etc.
- Flashing at windows, doors, chimneys, transitions between EIFS and roof and at other points specified shall be installed in accordance with component manufacturer’s instructions.
• All flashing should be installed per codes prior to the installation of Senerflex Classic PB Wall System.

**Insulation Boards**
- If using optional Senershield, Senershield-R, or Senershield-VB fluid-applied air/water-resistive barrier, refer to the product bulletin and technical bulletins for application instructions.
- All system terminations and penetrations must be back-wrapped with mesh and base coat.
- EPS board size is limited to 2’ x 4’. The thickness of the board must be 3/4” to 4”. The minimum thickness of EPS at any point on the wall can not be less than 3/4”. Consider this when installing reveals.
- Do not break reinforcing mesh in the reveal; offset 4–6” minimum. Do not align reveals with insulation board joints; offset 4–6” minimum.
- Offset from sheathing joints by a minimum of 16”. Offset from corners of doors, windows and other penetrations by a minimum of 4”.
- Stagger joints in a running bond pattern offset a minimum of 6”.
- Interlock corners.
- Prior to installation of the base coat, entire EPS covered wall must be completely rasped to remove high and low spots and to remove dust from the surface of the EPS.
- To avoid waste or insufficient adhesion, use the proper sized notched trowel to apply adhesive to back of insulation boards.
- If using mechanical fasteners, use only those specified by BASF Wall Systems and install according to specifications. Do not overdrive mechanical fasteners. They should recess only 1/16” from surface.
- Always fill voids in insulation layer greater than 1/16” with slivers of insulation and not with base coat or other materials.

**Reinforced Base Coat**
- Mesh color should never be visible through the base coat.
- If mechanical fasteners were used to attach insulation, pre-spot each washer head with base coat.
- Flexguard 4 Reinforcing Mesh/Intermediate 6/Intermediate 12 must overlap a minimum of 2 1/2”.
- Strong 15/Hi-Impact 20 mesh must not overlap; butt edges together.

After Strong 15/Hi-Impact 20 mesh are embedded in base coat, a second layer of Flexguard 4/Intermediate 6/Intermediate 12 and base coat must cover that layer.
- Install “butterflies” of standard mesh at corners of all windows, doors and other penetrations.
- Install a second layer of reinforcing mesh a minimum of 4” on both sides of inside and outside corners.
- Special shapes must also be reinforced with base coat and reinforcing mesh.
- This system is not designed for horizontal applications. Always maintain a minimum slope of 1:2 up to a maximum width of 12”.
- Protect work from precipitation for a minimum of 24 hours.

**Finish**
- Use only stainless steel trowels.
- Avoid working in direct sunlight.
- Finishes should be applied with adequate manpower, tools and staging to keep a wet edge.
- A primer tinted to the color of the finish is recommended prior to application of rilled finishes.
- Do not run finish into joints.
- Do not quit in the middle of a wall; run to natural breaks.
- Do not use different batches of finish on the same elevation.
- Protect from precipitation for a minimum of 24 hours.
- Do not apply finish over sealants.

**LIMITATIONS**
- Not for use on framed Type V, Group R construction under the IBC or framed construction under the IRC.
KEY UPGRADES AVAILABLE:
System upgrades can include the addition of a Senershield, Senershield-R or Senershield-VB as a secondary air and water-resistive barrier; high-impact resistant reinforcing mesh; specialty finishes; silicone enhanced textured finishes to improve dirt pick up and mildew resistance; and tinted primers to enhance final aesthetics.

SPECIFICATIONS & DETAILS
The contents of this system overview are intended to provide the design professional information required to evaluate this assembly against specific project requirements. Further useful information to support the creation of a project manual such as a guide specification, product bulletins, and assembly details are available on the Senergy website at www.senergy.basf.com.

TECHNICAL SUPPORT
For answers to questions or specific recommendations about this assembly, please consult our website at www.senergy.basf.com or contact our Technical Services Department: Toll-free 800-589-1336.

HEALTH & SAFETY
Follow good safety and industrial hygiene practices during handling and installing products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

WARRANTY
Refer to the Senergy EIFS, and Coating Warranty Schedule for specific information about this product/system.

BASF warrants this product to be free from manufacturing defects and to meet the technical properties on the current Product Bulletin, if used as directed within shelf life. Satisfactory results depend not only on quality products but also upon many factors beyond our control. BASF MAKES NO OTHER WARRANTY OR GUARANTEE, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WITH RESPECT TO ITS PRODUCTS. The sole and exclusive remedy of Purchaser for any claim concerning this product, including but not limited to, claims alleging breach of warranty, negligence, strict liability or otherwise, is shipment to purchaser of product equal to the amount of product that fails to meet this warranty or refund of the original purchase price of product that fails to meet this warranty, at the sole option of BASF. In the absence of an extended warranty issued by BASF, any claims concerning this product must be received in writing within one (1) year from the date of shipment and any claims not presented within that period are waived by Purchaser. BASF WILL NOT BE RESPONSIBLE FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFITS) OR PUNITIVE DAMAGES OF ANY KIND.

Purchaser must determine the suitability of the products for the intended use and assumes all risks and liabilities in connection therewith. This information and all further technical advice are based on BASF’s present knowledge and experience. However, BASF assumes no liability for providing such information and advice including the extent to which such information and advice may relate to existing third party intellectual property rights, especially patent rights, nor shall any legal relationship be created by or arise from the provision of such information and advice. BASF reserves the right to make any changes according to technological progress or further developments. The Purchaser of the Product(s) must test the product(s) for suitability for the intended application and purpose before proceeding with a full application of the product(s). Performance of the product described herein should be verified by testing and carried out by qualified experts.
