Project Profile
Strength-on-Demand Concrete
Philadelphia International Airport Taxiway

The Background
The Philadelphia International Airport, like many airports in the United States, had concrete aprons and taxiways in need of repair. In the fall of 2002, the decision was made to repair the damaged concrete areas. The project took approximately two months to complete.
The Challenge
The repairs consisted of replacing different concrete pavement sections. The construction took place in the evening to minimize disruption to the airport operations and the traveling public.

The Solution
To meet the challenges of repairing the apron and taxiway sections at the airport, a field trial evaluation was conducted to choose a concrete mixture that suited the needs of the contractor. Three different sets of mix proportions utilizing MasterGlenium 3030 high-range water-reducing admixture and MasterSet AC 534 accelerating admixture were evaluated to determine the best performing and most economical design. To facilitate rapid repair, a concrete mixture utilizing the 4x4 Concrete system was developed. The mixture, capable of achieving 3,500 psi (24 MPa) in eight hours, was selected and further developed by SJA Paving.

High-Early Strength
Concrete Mixture Proportions

Project Facts and Benefits
- The concrete was mixed in a central mixer and placed at night to minimize inconvenience to airport operations
- 20 minute haul time
- Consolidation of the concrete was achieved using an internal vibrator
- Finishing was accomplished by using a truss screed

Compressive Strength
- @ 7 h: 3,140 psi (21.7 MPa)
- @ 28 days: 6,820 psi (47.0 MPa)

Flexural Strength
- @ 7 h: 545 psi (3.8 MPa)
- @ 28 days: 850 psi (5.9 MPa)

- The airport was opened to traffic shortly after concrete was placed
- Airport operations were minimally affected using the 4x4 Concrete System
- 500 yd³ (382 m³) of 4x4 Concrete was placed

More Information
The Master Builders Solutions brand brings all of BASF’s expertise together to create chemical solutions for new construction, maintenance, repair and renovation of structures. Master Builders Solutions is built on the experience gained from more than a century in the construction industry.

The know-how and experience of a global community of BASF construction experts form the core of Master Builders Solutions. We combine the right elements from our portfolio to solve your specific construction challenges. We collaborate across areas of expertise and regions and draw on the experience gained from countless construction projects worldwide. We leverage global BASF technologies, as well as our in-depth knowledge of local building needs, to develop innovations that help make you more successful and drive sustainable construction.

The comprehensive portfolio under the Master Builders Solutions brand encompasses concrete admixtures, cement additives, chemical solutions for underground construction, waterproofing solutions, sealants, concrete repair & protection solutions, performance grouts, performance flooring solutions.
