Solutions for Light Industry
Reduced downtime
Master Builders Solutions offers a full range of products to enable a fast return to service, hence minimizing downtime. Many of its products such as the Ucrete flooring solution can be installed in weekends or overnight. Another example is Master X-Seed, which can achieve up to 50 percent reduction in concrete hardening time.

Enhanced health and safety
Master Builders Solutions contributes to a healthier environment for installers and building occupants through lower toxicity and VOC emissions of its products, which are also resistant to the growth of bacteria and fungi. Slips, trips and falls are another leading cause of injuries and accidents. These mishaps can be prevented by the non-skid flooring systems offered by the brand.

Global solutions – Local support
Backed by a network of production sites across over 60 countries globally, the strong presence of Master Builders Solutions in Asia Pacific offers easy and ready access to local sales and technical support. Our dedicated team of technical professionals are also on hand to help you find the best solutions, regardless of your location.

Durability
The innovative systems, customized products and expert services of Master Builders Solutions are designed to meet the highest benchmarks of performance – improving strength, durability, energy efficiency and safety – while making construction structures last longer.

Cost-effectiveness
By enhancing the durability of structures, Master Builders Solutions products provide for easy maintenance and lower maintenance costs, while preventing losses in production time due to regular maintenance or repair needs.

Superior products, services and support across Asia Pacific and around the world

Master Builders Solutions is BASF’s global brand of advanced chemical solutions designed for applications in building projects, from new construction to maintenance, repair, rehabilitation and upgrading, for the light industry and other sectors.

The comprehensive portfolio of products marketed under the brand include concrete admixtures, cement additives, grouts, concrete repair and protection solutions, waterproofing solutions, sealants and flooring solutions.
Industrial buildings and facilities

Industrial property covers a diverse range of building types from large pre-engineered steel structures to concrete masonry units. While these buildings have different functions, they are typically designed with large floor slabs, clear internal space and high bays to provide highly flexible internal layouts and optimal floor plate efficiency. For certain light industrial facilities, metal-sheet rooftops are common.

Light industrial buildings are expected to provide a structured environment for people, machineries and equipment with an emphasis on productivity. Not only do these buildings cater to the environmental requirements of their internal activities and processes, they must also be durable and resistant to harsh external conditions such as heavy rain, snow, the sun’s UV radiation and temperature fluctuations.

Master Builders Solutions offers a broad variety of solutions applicable to the entire lifespan of light industrial architectures and other building types, to ensure both their outer facades and internal environments remain intact through long periods of time.

Solutions for typical light industrial building:
1. MasterSeal roof waterproofing
2. MasterSeal joint sealants
3. MasterProtect coating
4. MasterFlow grouts
5. Ucrete and MasterTop flooring
6. MasterSeal below-ground protection
**Exterior surfaces**

Facades and other exterior surfaces of industrial buildings are constantly subject to weather extremities. Along with a host of unpredictable environmental factors, surfaces must be protected to avoid regular repair and maintenance works, both below- and above-ground level, to ensure their structural integrity.

**Below-ground: concrete and blockwork foundations**

Concrete and blockwork foundations beneath industrial buildings are vulnerable to the aggressive attack of waterborne chemicals found in soil. If left unprotected, foundations can get damaged and cause corrosion of steel.

Master Builders Solutions provides cost-effective, high-performance solutions to deliver concrete durability by protecting below-ground foundation structures against ingress of water and corrosion and preventing premature building failures.

**Roofs - metal sheets and concrete**

Roof leakages give rise to water ingress problems likely to undermine the concrete building structure. Water leaks may also cause damage to raw materials, products, machinery and technical equipment. Given the same conditions, metal sheet roofs will corrode and affect the building’s long-term durability, requiring costly repair. Durable, watertight and efficient solutions are provided under the Master Builders Solutions brand for both concrete and metal-sheets roofs.

Remarks: 1 = With additional topcoat  2 = With special primer  3 = With additional insulation

**Above-ground: concrete, block and masonry walls**

Exposed to wind-driven rain, UV radiation and other harsh elements; building facades, especially the outer walls, are prone to wear-and-tear problems, including cracks, displacements, leaks, corrosion and deterioration. Wall coatings and joint sealants from Master Builders Solutions are formulated to protect the walls and facades of buildings, safeguard their internal environments and ensure that the productivity, comfort and safety of people working in them remain uncompromised.

**Interior surfaces**

The interiors of industrial buildings and facilities, including the floors, inner walls and ceilings, are routinely exposed to chemical, mechanical and thermal hazards. Such surfaces need protection in order to continue to provide an operationally efficient and safe working environment.

**Floors**

Factories, warehouses and other light industrial facilities require flooring that can meet the demands dictated by the ongoing activities that take place in them. Master Builders Solutions offers a diverse assortment of flooring products capable of fulfilling several operational and safety requirements for these buildings.

**Ucrete® and MasterTop® flooring systems provide a wide range of solutions to meet operational and safety requirements.**

- **Dust-proofing and abrasion resistance**
  Increase the durability of floorings and their resistance to abrasion that might otherwise produce a dusty environment.

- **Slip resistance**
  Provide range of surface profiles with textures to prevent slips, falls and trips to cut down occupational accidents and injuries.

- **Mechanical - impact resistance**
  Provide excellent mechanical properties to withstand the heavy impact of falling objects and prevent floor damage, work interruption and an unsafe environment.

- **Thermal shock resistance**
  Remain unaffected until temperatures of 130 degree and occasional 150 degree Celsius. Provide a range of thicknesses to protect the substrate from the enormous stresses of a thermal shock event and arrest premature failures.

- **Hygiene and cleainability**
  Prevent bacteria growth, while ensuring that flooring systems can be cleaned to stainless steel standards and ensure sanitation for a hygienic environment.

- **Chemical resistance**
  Withstands aggressive chemical exposure derived from operational and cleaning process thus eliminating damage and maintenance costs.

- **Non-tainting**
  Allows flooring to be laid in presence of food without altering the taste and smell in situations where expansion or repairs are required.

- **Electrical compatibility**
  Provide antistatic and conductive properties needed to control undesired static electricity so as to prevent explosions, potential damage to electronic equipment and other safety and production repercussions.

- **Aesthetics**
  Wide range of colors and textures available to enhance the aesthetics of industrial spaces and color-indication for different operations for easy identifications and to improve efficiency.
Functional exposure conditions

1. Raw materials storage including chemicals
   - Ucrete flooring systems

2. Office area
   - MasterTop decorative flooring system

3. Laboratory
   - Ucrete anti-static flooring

4. Washrooms and staff lockers
   - MasterSeal waterproofing
   - MasterTile adhesives and tile fixing system

5. Production area
   - Ucrete flooring systems

6. Packaging facilities
   - MasterFlow grouts
   - Ucrete flooring systems

7. Warehousing and delivery
   - MasterTop and Ucrete flooring systems

8. Exterior and interior construction joints
   - MasterSeal sealants

9. Structural columns grouting
   - MasterFlow grouts

Legend:
- Slip resistance
- Mechanical - impact resistance
- Chemical resistance
- Aesthetics
- Electrostatic compatibility
- Hygiene and cleanability
- Dust-proofing and abrasion resistance
- Thermal shock resistance
- Non-tainting
### Interior walls, coves and drains

Interior walls, coves and drains need to provide a surface to meet the functional requirements and overcome the added challenge of potentially forming joints and seams where bacteria can breed.

Flooring must have a seamless interface with drains, coves and walls to achieve a hygienic environment.

### Equipment grouting

Static, reciprocating and dynamic load transfers require heavy industrial equipment to be properly grouted in place.

Grout delivers this vital interface to protect equipment assets and ensures a smooth production process.

### Wet area waterproofing

Shower rooms, kitchens and toilets are constantly exposed to water which subjects them to structural damage as well as promote an unhealthy environment and interrupt the production process.

Waterproofing membranes and tile adhesives must provide a watertight solution for structure durability and hygiene.

**Water management**

Substantial amounts of potable water is used in the manufacturing process, while equally large volumes of effluent is generated at the same time. Safe management of both potable and effluent is important in meeting the requirements of health, safety and environmental compliance.

### Potable water tanks and treatment

The onsite treatment and safe storage of potable water, over extended periods of time, is a basic need for many industries. Waterproofing and protection systems must ensure water tanks remain watertight and comply to potable water standards.

### Non-potable tanks and waste water treatment

Wastewater infrastructures, including tanks and sewers, are exposed to harsh chemicals that can cause significant damage and create costly rehabilitation or maintenance works. While concrete is very durable, it can be susceptible to corrosion, dilapidation, cracks and erosion, leading to its structural failure and environmental contamination. Waterproofing and protective systems must safeguard wastewater treatment facilities and the infrastructure from the aggressive exposure.

**Concrete repairs**

Reinforced concrete, a primary component in many industrial structures, is prone to deterioration owing to protracted exposure to the environment and manufacturing process. It is necessary to protect and repair these structures to ensure their structural integrity, durability and safety.

### Structural concrete repairs

Steel-reinforced concrete structures require protection and maintenance to prevent the onset of corrosion, which can lead to unnecessary downtime. Concrete repair and protection systems must minimize and prevent the loss of structural integrity in these structures and ensure uninterrupted operations.

### Non-structural concrete repairs

Even non-structural elements can cause safety hazards and interrupt production if not prevented or properly restored. Concrete repair and protection systems must be fast and easy to apply to eliminate potential safety risks.

Xolutec – a new technology for extreme challenges

Xolutec is an innovative and smart way of combining complementary chemistries. When the material is mixed on site, a cross-linked interpenetrating network (XPN) is formed, enhancing the overall material properties.

Xolutec can be designed in a wide variety of compositions to achieve unique characteristics. These can provide seemingly contradictory properties, such as attractive aesthetics and excellent abrasion or chemical resistance combined with effective crack-bridging.

By controlling the cross-linking density, the properties of Xolutec can be adjusted to suit the product performance required. For example, a formulation of materials with varying degrees of toughness and flexibility can be created.

Xolutec is very low in volatile organic compounds (VOC) and is quick and easy to apply with both spray and hand application equipment, depending on the requirements. It cures rapidly, even at low temperatures thus reducing application time and enabling fast return to service with minimal downtime.

The technology is insensitive to moisture and tolerates a wide variety of site conditions, greatly expanding the application window while reducing the potential for delays and failures.

Long maintenance cycles and lower life cycle costs significantly reduce the total cost of ownership.

Xolutec’s extreme versatility and capacity to formulate a wide variety of solutions for specific requirements create a new dimension in material technology for the construction industry, including MasterSeal 7000 CR and MasterTop TC 941.

MasterTop TC 941

The innovative topcoat with exceptional cleanability and scratch resistance for hard wearing solutions.

MasterTop TC 941 is a pigmented, non solvented, two component topcoat producing a light stable, tough and durable surface with a lightly structured gloss finish that has exceptional scratch and wear resistance. It is used to provide aesthetic durable floors for industrial and commercial applications.

MasterSeal 7000 CR

360° Protection for Extreme Conditions

Solution for waterproofing and concrete protection system with a unique combination of application and performance properties that meet the challenges of aggressive wastewater environments. The performance-proven MasterSeal 7000 CR system significantly extends the life cycle of concrete structures.
